

Top 10 Features Importance Analysis

The model identifies market trends (Uptrend, Downtrend, Sideways) using 14 technical indicators.

The top 10 most influential features are:

These features make sense collectively as they capture trend direction, volatility regimes, and momentum shifts, which are critical for anticipating market behavior. Together, these features align with how traders interpret market structure, combining direction, strength, and volatility to make informed decisions:

- sma_200, sma_20, price_to_sma_50 (Trend indicators) help identify sustained directional movement — essential for timing entries and exits.
- volatility_20, atr_14, bb_width (Volatility metrics) signal regime changes, often preceding breakouts or reversals.
- volume_sma_20 (Volume signals) reflect market conviction — rising volume often confirms trend strength.
- macd, momentum_20 (Momentum indicators) detect acceleration or deceleration in price movement, useful for spotting early trend shifts.
